

Direct Internet Access

A New Era in Internet Connectivity

Neo-Tel's Direct Internet Access solution connects your business to the Internet at high speed. Neo-tel offers a range of connectivity speeds - all with unparalleled performance and reliability.

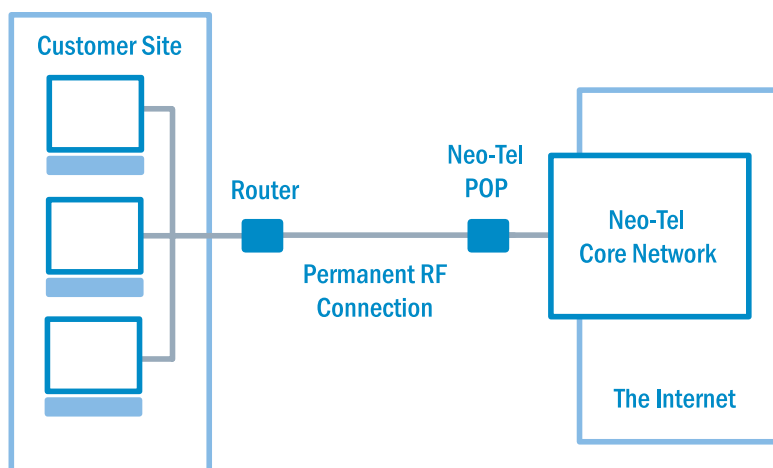

With Direct Internet Access, you benefit from dedicated connectivity to our infrastructure without the need of expensive traditional leased circuits.

Fast Connections, Unlimited Usage

Our connectivity is full duplex, so there are no limitations on the upstream bandwidth, delivering a truly corporate solution.

Because we are not reliant on third party leased lines, there is no delay on installation and services can normally be delivered within a working week.

Direct Internet Access has unrestricted usage so you benefit from reliable, un-contended, high bandwidth Internet connectivity.

Key Features:

- Speeds from 5Mbps to 100Mbps+
- Currently available within the M25
- Full duplex / always-on connectivity
- Proprietary data link encoding technology with built-in secure encryption
- 99.5% SLA for network availability (packet success and latency SLAs also included)
- 24/7/365 proactive technical support
- Quick installation and seamless set-up by dedicated installations engineer
- No usage charge
- Domain name registration / IP address assignment / primary & secondary DNS
- NNTP access
- On-line monitoring portal (Neo-Port)

'Our highly regarded team of experts cover all aspects of the secure networks and Internet arena, with over 30 years of experience'

About Neo-Tel

Neo-Tel is leveraging recent developments in wireless technology to deliver a range of corporate connectivity solutions to businesses of all sizes.

Our approach has been proven in a range of demanding applications around the globe. It allows for higher bandwidths to be delivered via exceptionally secure wireless technology with almost no lead time to installation - and the potential to significantly reduce costs.

We manage our own dedicated network and provide unrivalled levels of customer support, so your business gets connected quickly and efficiently - and stays connected.

Reliable and Secure

By leveraging massive recent improvements in RF technology, Neo-Tel can match, or in many cases, exceed the service levels offered by traditional leased circuits.

With RF technology, the amount of switching equipment is greatly reduced, ensuring there is less reliance on the underlying infrastructure. The RTTs (Round Trip Times) for data on our RF network are exceptional. The Neo-Tel Network Management Centre ensures that the connectivity is maintained at the levels defined in the SLA.

Neo-Tel networks are very secure. Proprietary data link encoding technology with built-in encryption, coupled with dedicated point to point connections ensure the most reliable and secure transfer of your data.

Additional Options

- Network Security - Neo-Tel provides fully managed firewall protection.
- Email Security - Content filtering is offered through Neo-Tel with a partnership with the industry leaders in this field.
- Back-up - The service can be backed up by ISDN, PSTN and ADSL.
- Router - Neo-Tel provide a fully managed and configured router.
