

Point 2 Point Access

Connecting LANs Wirelessly

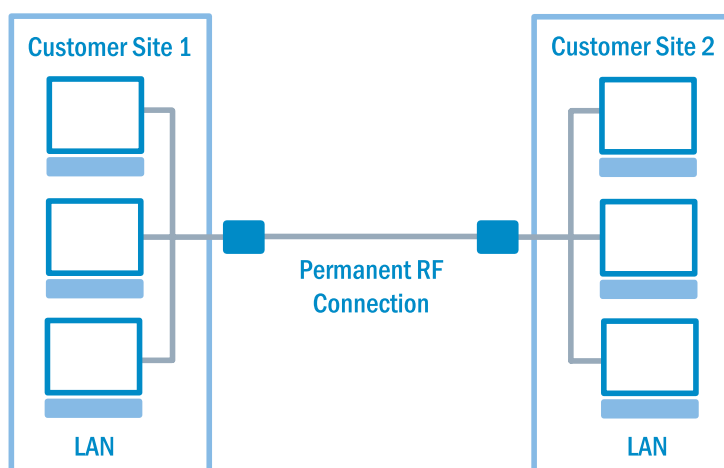

Neo-Tel's Point 2 Point Access service is a national product that connects company LANs wirelessly with your choice of bandwidth.

Point 2 Point is the perfect solution for businesses that wish to connect LANs with reduced outlay, whilst maintaining the performance of expensive traditional leased circuits. There is no limitation to the type of traffic that can be delivered across it.

People looking for traditional leased line services expect to pay premium leased line prices. Now that RF technology has reached new levels of performance, usability and security there is no need to pay extraordinary costs. The price of Neo-Tel Point 2 Point is exceptionally competitive; why pay more?

How it Works

Data and/or voice is exchanged between sites via a permanent RF connection. Huge advances in RF technology enable Neo-Tel to offer an impressive service level around this product - something previously unheard of.

Key Features:

- Speeds from 5Mbps to 100Mbps+
- Distances up to 100km
- Full duplex / always-on connectivity
- Proprietary data link encoding technology with built-in secure encryption
- 99.5% SLA for network availability (packet success and latency SLAs also included)
- 24/7/365 proactive technical support
- Quick installation and seamless set-up by dedicated installations engineer
- True resilience

'Neo-Tel provides a complete range of services to get your business connected - quickly and securely, with minimum investment'

About Neo-Tel

Neo-Tel is leveraging recent developments in wireless technology to deliver a range of corporate connectivity solutions to businesses of all sizes.

Our approach has been proven in a range of demanding applications around the globe. It allows for higher bandwidths to be delivered via exceptionally secure wireless technology with almost no lead time to installation - and the potential to significantly reduce costs.

We manage our own dedicated network and provide unrivalled levels of customer support, so your business gets connected quickly and efficiently - and stays connected.

Reliable and Secure

Network throughput is maintained and guaranteed by Neo-Tel, giving the only realistic carrier alternative. The technology has been designed for the next generation of network architecture, ensuring that your current and future network requirements are covered.

By leveraging massive recent improvements in RF technology, Neo-Tel can match, or in many cases, exceed the service levels offered by traditional leased circuits.

With RF technology, the amount of switching equipment is greatly reduced, ensuring there is less reliance on the underlying infrastructure. The RTTs (Round Trip Times) for data on our RF network are exceptional. The Neo-Tel Network Management Centre ensures that the connectivity is maintained at the levels defined in the SLA.

Neo-Tel networks are very secure. Proprietary data link encoding technology with built-in encryption, coupled with dedicated point to point connections ensure the most reliable and secure transfer of your data.

Cost Effective

Neo-Tel do not charge for usage - and only a single connection is required at each of your sites. There is no need for additional 'telco' infrastructure costs - and there will never be extra dig costs or capacity issues with the service.
